

Public Transit Planning and Operation: *Modeling, Practice and Behavior*

Second Edition

Avishai (Avi) Ceder

CRC Press, Boca Raton, USA, 2016.

CONTENTS

PREFACE

Chapter 1. INTRODUCTION to TRANSIT SERVICE PLANNING

- 1.1 Motivation
 - 1.2 Operational Planning Decomposition Process
 - 1.3 Service and Evaluation Standards and Their Derivatives
 - 1.4 Viability Perspectives
 - 1.5 Outline of Other Chapters
- References

Chapter 2. DATA REQUIREMENTS and COLLECTION

- 2.1 Introduction
 - 2.2 Data-Collection Techniques
 - 2.3 Data Requirements
 - 2.4 Basic Statistical Tools
 - 2.5 Literature Review and Further Reading
- References

Chapter 3. FREQUENCY and HEADWAY DETERMINATION

- 3.1 Introduction
 - 3.2 Max Load (Point Check) Methods
 - 3.3 Load Profile (Ride Check) Methods
 - 3.4 Criterion for Selecting Point Check or Ride Check
 - 3.5 Conclusion (Two Examples)
 - 3.6 Literature Review and Further Reading
- Exercises
- References

Chapter 4. TIMETABLE DEVELOPMENT

- 4.1 Introduction
 - 4.2 Objectives, Optional Timetables, and Comparison Measures
 - 4.3 Even Headways with Smooth Transitions
 - 4.4 Headways with Even Average Loads
 - 4.5 Automation, Test Runs, and Conclusion
 - 4.6 Literature Review and Further Reading
- Exercises

References

Chapter 5. ADVANCED TIMETABLES, OPTIMIZATION and SYNCHRONIZATION

- 5.1 Introduction
- 5.2 Even Max Load on Individual Vehicles
- 5.3 Even Headways with Even Average Loads
- 5.4 Timetables Based on a Multi-Objective Approach
- 5.5 Optimization, Operations Research, and Complexity
- 5.6 Minimum Passenger-Crowding Timetables for a Fixed-Vehicle Fleet
- 5.7 Maximum Synchronization Formulation and OR Model
- 5.8 Literature Review on Synchronization and Further Reading

Exercises

References

Chapter 6. VEHICLE SCHEDULING I: FIXED SCHEDULES

- 6.1 Introduction
- 6.2 Fleet Size Required for a Single Route
- 6.3 Example of an Exact Solution for Multi-Route Vehicle Scheduling
- 6.4 Max-Flow Technique for Fixed Vehicle Scheduling
- 6.5 Deficit-Function Model with Dead-Heading Trip Insertion
- 6.6 Depot-Constrained Vehicle Scheduling
- 6.7 Literature Review and Further Reading

Exercises

References

Appendix: The Maximum-Flow (Max-Flow) Problem

Chapter 7. VEHICLE SCHEDULING II: VARIABLE SCHEDULES

- 7.1 Introduction
- 7.2 Fleet-Size Lower Bound for Fixed Schedules
- 7.3 Variable Trip-Departure Times
- 7.4 Fleet-Size Lower Bound for Variable Schedules
- 7.5 Fleet-Reduction Procedure
- 7.6 Experiences with Bus Schedules
- 7.7 Examination and Consideration of Even-Load Timetables

Exercises

References

Appendix: Example of Vehicle-Scheduling Software

Chapter 8. VEHICLE-TYPE and SIZE CONSIDERATIONS IN VEHICLE SCHEDULING

- 8.1 Introduction
- 8.2 Overview and Optimization Framework
- 8.3 DF-Based Procedure for Vehicle-Type Scheduling Problem (VTSP)
- 8.4 Examples of the DF-Based VTSP
- 8.5 Min-Cost Flow Procedure for Multi Types Vehicle Scheduling Problem
- 8.6 Vehicle-Size Determination

8.7 Optimal Transit-Vehicle Size: Literature Review
Exercises
References

Chapter 9. CREW SCHEDULING

9.1 Introduction
9.2 Vehicle-Chain Construction Using a Minimum Crew-Cost Approach
9.3 Mathematical Solutions
9.4 A Case Study: NJ Commuter Rail
9.5 Crew Rostering
9.6 Literature Review and Further Reading
Exercises
References
Appendix: The Shortest-Path Problem

Chapter 10. PASSENGER DEMAND

10.1 Introduction
10.2 Transit Demand, Its Elasticity and Factors
10.3 Example of a Demand Forecasting Method and Process
10.4 Multinomial Logit (MNL) Model
10.5 Literature Review and Further Reading (O-D Estimation)
Exercises
References

Chapter 11. ROUTE CHOICE and ASSIGNMENT

11.1 Introduction
11.2 Route Choice Using Waiting-Time Strategy
11.3 Proportion of Passengers Boarding Each Route
11.4 Proportions Derived for Regular Vehicle Arrivals
11.5 Passenger Assignment Based on Route Choice
11.6 Literature Review and Further Reading
Exercises
References

Chapter 12. SERVICE DESIGN: ELEMENTS, OPERATIONAL PARKING and STOP LOCATION

12.1 Introduction
12.2 Service-Design Elements
12.3 Scheduling-Based Solution for Operational Parking Conflicts
12.4 Optimum Stop Location: Network-Based Theoretical Approach
12.5 Stop Placement Considering Uneven Topography
12.6 Literature Review and Further Reading
Exercises
References

Chapter 13. COORDINATION and CONNECTIVITY: MEASURES and ANALYSIS

- 13.1 Introduction
- 13.2 Connectivity Measures
- 13.3 Detecting Weaknesses on Inter-Route and Inter-Modal Paths
- 13.4 Detecting Bottlenecks in Coordinated Networks
- 13.5 Equity in Transit Provision
- 13.6 Literature Review and Further Reading

Exercises

References

Chapter 14. COORDINATION and CONNECTIVITY: BEHAVIORAL ASPECTS

- 14.1 Introduction
- 14.2 Psychological factors influencing passengers' intentions to make transfers
- 14.3 Effects of variation in out-of-vehicle times on passengers' decisions to make transfers
- 14.4 Just noticeable difference of travel time and cost savings for route choice
- 14.5 Planned and unplanned transfers: A guideline for policy makers
- 14.6 Literature review and further reading

Exercises

References

Chapter 15. NETWORK (ROUTES) DESIGN

- 15.1 Introduction
- 15.2 Objective Functions
- 15.3 Methodology and Example
- 15.4 Bus-Network Design with Demand Variation
- 15.5 A Methodology for Actual-Size Transit-Network Design
- 15.6 Connected Priority-Lane Consideration in Bus Networks
- 15.7 Literature Review and Further Reading

Exercises

References

Chapter 16. DESIGNING SHORT-TURN TRIPS

- 16.1 Introduction
- 16.2 Methodology
- 16.3 Candidate Points and Example
- 16.4 Excluding Departure Times
- 16.5 Maximum Extensions of Short-Turn Trips
- 16.6 Literature Review and Further Reading

Exercises

References

Chapter 17. SMART SHUTTLE and FEEDER SERVICE

- 17.1 Introduction

- 17.2 Minimum Fleet for a Circular (Shuttle) Route
- 17.3 Routing Strategies
- 17.4 Simulation
- 17.5 Case Study
- 17.6 Customer Survey
- 17.7 Optimal Routing Design: Base Network
- 17.8 Optimal Routing Design: Algorithm
- 17.9 Implementation Stages
- 17.10 Literature Review and Further Reading
- Exercises
- References

Chapter 18. SERVICE RELIABILITY

- 18.1 Introduction
- 18.2 Measures of Reliability and Causes of Unreliable Service
- 18.3 Modeling of Reliability Variables
- 18.4 Passenger Waiting Time at a Stop
- 18.5 Advanced Reliability-Based Data and Control
- 18.6 Techniques to Resolve Reliability Problems
- 18.7 Literature Review and Further Reading
- Exercises
- References

Chapter 19. OPERATIONAL STRATEGIES AND TACTICS

- 19.1 Introduction
- 19.2 Multi-Agent Transit System (MATS)
- 19.3 Vehicle Encounters on Road Segments
- 19.4 Simulation Model for Synchronized Transfers
- 19.5 Holding and Skip-Stop/Segment Tactics for Transfer Synchronization
- 19.6 Transfer Synchronization using Inter-Vehicle Communication
- 19.7 Literature Review and Further Reading
- Exercises
- References

Chapter 20. FUTURE DEVELOPMENTS IN TRANSIT OPERATIONS

- 20.1 Introduction and New Direct-Transfer Concept
- 20.2 Developments in Transit Automation
- 20.3 Example of a Two-Way Monobeam Elevated Transit
- 20.4 Literature Review and Further Reading of Future Trends
- 20.5 Concluding remark
- References

Answers to Exercises
